UPVC

Windows&Doors

UPVC stands for unplasticized polyvinyl chloride, a hard plastic material commonly used in windows and doors. The material is resistant to pollution, moisture, corrosion, and mold. We have two kinds of profiles, American style window and European style window. The biggest difference between them is that American windows have flange nails. We can do fixed, casement, awning, single/double sliding, single/double hung, turn and tilt etc.

American style UPVC windows
